Answer: C
Explanation:
Explanation
You configure your load balancer to accept incoming traffic by
specifying one or more listeners. A listener is a process that
checks for connection requests. It is configured with a
protocol and port number for connections from clients to the
load balancer and a protocol and port number for connections
from the load balancer to the targets.

Elastic Load Balancing supports three types of load balancers: Application Load Balancers, Network Load Balancers, and Classic Load Balancers. There is a key difference between the way you configure these load balancers. With Application Load Balancers and Network Load Balancers, you register targets in target groups, and route traffic to the target groups. With Classic Load Balancers, you register instances with the load balancer.

NEW QUESTION: 4
The administrator sets up two new IT policies as well as three new software configurations to distribute amongst three groups that are already setup in the BlackBerry Administration Service. By default, how long will it take before any user receives an IT policy or software configuration? (Choose one)
A. 30 minutes
B. 5 minutes
C. 10 minutes
D. 20 minutes
E. 15 minutes
Answer: E
