Explanation:
Steganography is the process of concealing a file, message, image, or video within another file, message,
image, or video. In this case, it is a hidden volume within the encrypted hard drive.

In cryptography, deniable encryption may be used to describe steganographic techniques, where the very existence of an encrypted file or message is deniable in the sense that an adversary cannot prove that an encrypted message exists. This then provides you with plausible deniability.
