NEW QUESTION: 3

A. https://999988887777.aws.amazon.com/examkiller/
B. https://999988887777.signin.aws.amazon.com/console/
C.

https://examkiller.signin.aws.amazon.com/999988887777/console/
D. https://signin.aws.amazon.com/examkiller/
Answer: B
Explanation:
AWS Identity and Access Management is a web service which allows organizations to manage users and
user permissions for various AWS services. Once the organization has created the IAM users, they will
have a separate AWS console URL to login to the AWS console. The console login URL for the IAM user
will be https:// AWS_Account_ID.signin.aws.amazon.com/console/. It uses only the AWS account ID
and does not depend on the group or user ID.

NEW QUESTION: 4
A corporation is designing a wireless network that must provide VoWLAN services on the 5 GHz band. They plan to use their existing Cisco 5520 WLC, AIR-CAP3702I-A-K9 Aps, and Cisco 8821 wireless IP phones which, based on the phone specifications, have a maximum transmit power of
14 dBm. The network engineer performed a site survey with an AIR-CAP3702I-A-K9 AP operating at a 100 mW on the 5 GHz band, and using UNII-I channels only for cell planning. His survey report identified that they have sufficient coverage on the site, and overlap between cells was 15-20%. However, after deployment, users report that sometimes they have one-way audio problems while moving around the floor. Which is the root cause of the problem?
A. This problem happens because DFS channels were used for planning.
B. During the survey phase, the network engineer had to configure the survey AP to operate at 25 mW to ensure proper coverage.
C. This problem happens due to co-channel interference (CCI) because only four channels were used for cells planning.
D. Cell overlap is not sufficient for seamless roaming, and that leads to the problem with phone conversations when users are walking around the site while on a call.
Answer: C
