NEW QUESTION: 1

You are developing an application that analyzes population data for major cities in the United States. The application retrieves population statistics for a city by using a web service.

You need to request data from the web service by using jQuery. Which code segment should you use?

- A. Option B
- B. Option A
- C. Option C
- D. Option D

Answer: D

Explanation:

Explanation/Reference:

* type:

We post a SOAP request.

* data:

Data to be sent to the server.

The data option can contain either a query string of the form key1=value1&key2=value2, or an object of the form {key1: 'value1', key2: 'value2'}.

Reference: jQuery.ajax()

NEW QUESTION: 2

A. Option D

B. Option B

C. Option A

D. Option C

Answer: B

Explanation:

Explanation

The AWS Documentation mentions the following AWS DeploymentCommand has a rollback option in it. Following commands are available for apps to use:

deploy: Deploy App.

Ruby on Rails apps have an optional args parameter named migrate. Set Args to {"migrate":["true"]} to migrate the database.

The default setting is {"migrate": ["false"]}.

The "rollback" feature Rolls the app back to the previous version.

When we are updating an app, AWS OpsWorks stores the previous versions, maximum of upto five versions.

We can use this command to roll an app back as many as four versions.
