NEW QUESTION: 2

A Development team is adding a new country to an e-commerce application. This addition requires that new application features be added to the shipping component of the application. The team has not decided if all new features should be added, as some will take approximately six weeks to build. While the final decision on the shipping component features is being made, other team members are continuing to work on other features of the application.

Based on this situation, how should the application feature deployments be managed?

- A. Add the code updates as commits to the release branch. The team can delay the deployment until all features are ready.
- B. Add the code updates as a single commit when a feature is ready. Tag this commit with "new-country."
- C. Add the code updates as commits to a feature branch. Merge the commits to a release branch as features are ready.
- D. Create a new repository named "new-country". Commit all the code changes to the new repository.
