Answer: D

NEW QUESTION: 3
An administrator has an ONTAP cluster configured for SAN use. There are no port sets configured on the cluster. The SAN is configured as dual-fabric, with no zones defined on the switches.
Referring to the exhibit, which two statements describe the host-to-storage connectivity? (Choose two.)

A. Each FAS9000 node has 4 targets ports per fabric
B. DM-MP is in use
C. Each FAS9000 node has 2 targets ports per fabric
D. There are eight optimized paths from host to storage
Answer: A,B

NEW QUESTION: 4
CORRECT TEXT

_

--- ------

Answer:
Explanation:
Please see below explanation part for details answer steps:
Explanation:
We should create an access-list and apply it to the interface
that is connected to the Server LAN because it can filter out
traffic from both S2 and Core networks. To see which interface
this is, use the "show ip int brief" command:

Macintosh HD:Users:danielkeller:Desktop:Screen Shot 2015-11-17
at 3.24.34 PM.png
From this, we know that the servers are located on the fa0/1
interface, so we will place our numbered access list here in
the outbound direction.
Corp1#configure terminal
Our access-list needs to allow host C - 192.168125.3 to the
Finance Web Server
172.22.109.17 via HTTP (port 80), so our first line is this:
Corp1(config)#access-list 100 permit tcp host 192.168.125.3
host 172.22.109.17 eq 80
Then, our next two instructions are these:
- Other types of access from host C to the Finance Web Server
should be blocked. - All access from hosts in the Core or local
LAN to the Finance Web Server should be blocked. This can be
accomplished with one command (which we need to do as our ACL
needs to
be no more than 3 lines long), blocking all other access to the
finance web server:
Corp1(config)#access-list 100 deny ip any host 172.22.109.17
Our last instruction is to allow all hosts in the Core and on
the local LAN access to the Public Web Server (172.22.109.18)
Corp1(config)#access-list 100 permit ip host 172.22.109.18 any
Finally, apply this access-list to Fa0/1 interface (outbound
direction)
Corp1(config)#interface fa0/1 Corp1(config-if)#ip access-group
100 out
Notice: We have to apply the access-list to Fa0/1 interface
(not Fa0/0 interface) so that the access-list can filter
traffic coming from both the LAN and the Core networks. To
verify, just click on host C to open its web browser. In the
address box type http://172.22.109.17 to check if you are
allowed to access Finance Web Server or not. If your
configuration is correct then you can access it.
Click on other hosts (A, B and D) and check to make sure you
can't access Finance Web Server from these hosts. Then, repeat
to make sure they can reach the public server at
172.22.109.18. Finally, save the configuration
Corp1(config-if)#end Corp1#copy running-config startup-config
