NEW QUESTION: 3

When AAA login authentication is configured on Cisco routers, which two authentication methods should be used as the final method to ensure that the administrator can still log in to the router in case the external AAA server fails? (Choose two.)

- A. local

- B. group RADIUS
- C. if-authenticated
- D. group TACACS+
- E. krb5
- F. enable

Answer: A,F

Explanation:

http://www.cisco.com/en/US/docs/ios/12_2/security/configuration/guide/scftplus.html

TACACS+ Authentication Examples

The following example shows how to configure TACACS+ as the security protocol for PPP authentication:

```
aaa new-model
aaa authentication ppp test group tacacs+ local
tacacs-server host 10.1.2.3
tacacs-server key goaway
interface serial 0
ppp authentication chap pap test
```

The lines in the preceding sample configuration are defined as follows:

*The `aaa new-model` command enables the AAA security services.
*The `aaa authentication` command defines a method list, "test," to be used on serial interfaces running PPP. The keyword `group tacacs+` means that authentication will be done through TACACS+. If TACACS+ returns an ERROR of some sort during authentication, the keyword `local` indicates that authentication will be attempted using the local database on the network access server.

Authentication Start to configure TAC+ on the router. Enter enable mode and type `configure terminal` before the command set. This command syntax ensures that you are not locked out of the router initially, providing the `tac_plus_executable` is not running:

```
!--- Turn on TAC+.
aaa new-model
enable password whatever
!--- These are lists of authentication methods.
!--- "linmethod", "vtymethod", "conmethod", and
!--- so on are names of lists, and the methods
!--- listed on the same lines are the methods
!--- in the order to be tried. As used here, if
!--- authentication fails due to the
!--- tac_plus_executable not being started, the
!--- enable password is accepted because
!--- it is in each list.
!
aaa authentication login linmethod tacacs+ enable
aaa authentication login vtymethod tacacs+ enable
aaa authentication login conmethod tacacs+ enable
```
