We have solved all your problems about the exam, If you try to use our study materials one time, you will know how easy to pass exam with our C\_C4H510\_04 exam questions and answers.

We are offering all Questions and Answers in Testing Engine which comes with 100% Back Guarantee, Our IT elite team will provide you with accurate and detailed training materials about SAP C\_C4H510\_04 certification exam.

So it is difficult to spare time for extra study, The latest version for C\_C4H510\_04 training materials will be sent to your email automatically, These SAP C\_C4H510\_04 exam dumps are authentic and help you in achieving success.

If you buy our C\_C4H510\_04 study materials you will pass the C\_C4H510\_04 exam successfully and realize your goal to be the talent, Up to now, many people have consulted about our SAP Certified Application Associate - SAP Service Cloud 2011 exam dump through online [New 220-1102 Test Questions](#) after sale service and the consultation has helped them build a good relationship with our company.

#### **NEW QUESTION: 1**

An application is waiting for notification of changes to a tmp directory using the following code statements:

```
Path dir = Paths.get("tmp")
```

```
WatchKey key = dir.register (watcher, ENTRY_CREATE,  
ENTRY_DELETE, ENTRY_MODIFY) ;
```

In the tmp directory, the user renames the file testA to testB, Which statement is true?

- A.** The events received and the order of events are platform dependent.
- B.** The events received and the order of events are consistent across all UNIX platforms.
- C.** The events received and the order of events are consistent across all Microsoft Windows versions.
- D.** The events received and the order of events are consistent across all platforms.

**Answer: D**

Explanation:

Most file system implementations have native support for file

change notification. The

WatchService API takes advantage of this support where available.

However, when a file system does not support this mechanism, the WatchService will poll the file system, waiting for events.

Note:

WatchKey : When a Watchable entity is registered with a WatchService a key which is a

WatchKey is generated. Initially the key is in ready state waiting to be notified of any events

on the Watchable entity. Once an event occurs the key goes into signaled state and allows

to access the events using its pollEvents method.

After processing the poll events the key has to be reset by invoking its reset method.
