Answer: D

NEW QUESTION: 4

A placement group in Amazon EC2 can

A. logically name and tag different tiers of the system (DB, application, business logic etc).

B. reduce network latency and increase network throughput

C. place high memory instances in one logical group.

D. isolate any instance-type physically so that groups access local resources.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

A placement group is a logical grouping of instances within a single Availability Zone. Placement groups are recommended for applications that benefit from low network latency, high network throughput, or both.

To provide the lowest latency, and the highest packet-per-second network performance for your placement group, choose an instance type that supports enhanced networking.
