NEW QUESTION: 1

Drag the drop the description from the left onto the routing protocol they describe on the right.

Answer:

Explanation:

Explanation

Unlike OSPF where we can summarize only on ABR or ASBR, in EIGRP we can summarize anywhere. Manual summarization can be applied anywhere in EIGRP domain, on every router, on every interface via the ip summary-address eigrp asnumber address mask [administrative-distance summary-address eigrp 1 192.168.16.0 255.255.248.0). Summary route will exist in routing table as long as at least one more specific route will exist. If the last specific route will disappear, summary route also will fade out. The metric used by EIGRP manual summary route is the minimum metric of the specific routes.

NEW QUESTION: 2

Which of the following types of risk would an investor who does NOT receive payments on a security under the original terms be subject to?

- A. Asset liquidity
- B. Price
- C. Credit
- D. Foreign exchange

Answer: C

NEW QUESTION: 3

Refer to the exhibit.

R4 is configured as an OSPF stub; however, R4 should still be learning the OSPF LSA type 3 interarea routes from 209.165.202.130. Which action will solve this issue?

- A. Enable sending summary LSA's by removing no-summary from the stub command on the ASBR.
- B. Enable sending summary LSA's by removing no-summary from the stub command on the ABR.
- C. Control of interarea route propagation is best handled with EIGRP.
- D. Remove any route maps from R4 that are filtering the incoming OSPF updates.

Answer: B

Explanation:

By default the no-summary command should NOT be enabled on the ABR as this would make Area 20 a Totally Stubby Area not a Stub area. And R4 should receive routes from 209.165.202.130 as it is directly connected to Area 0 based off of the exhibit.
