**NEW QUESTION: 3**

CORRECT TEXT

You are designing a package control flow. The package moves sales order data from a SQL Azure transactional database to an on-premise reporting database. The package will run several times a day, while new sales orders are being added to the transactional database.

The current design of the package control flow is shown in the answer area. (Click the Exhibit button.)

The Insert New Orders Data Flow task must meet the following requirements:

Usage of the tempdb database should not be impacted. Concurrency should be maximized, while only reading committed transactions.

If the task fails, only that task needs to be rolled back. You need to configure the Insert New Orders Data Flow task to meet the requirements.

How should you configure the transaction properties? To answer, select the appropriate setting or settings in the answer area.

**Answer:**

Explanation:

IsolationLevel = ReadCommitted. TransactionOption = Required
