**Answer: B**

Explanation:  
Explanation

A stack set lets you create stacks in AWS accounts across regions by using a single AWS CloudFormation template. All the resources included in each stack are defined by the stack set's AWS CloudFormation template. As you create the stack set, you specify the template to use, as well as any parameters and capabilities that template requires.  
<https://docs.aws.amazon.com/AWSCloudFormation/latest/UserGuide/stacksets-concepts.html>  
<https://sanderknape.com/2017/07/cloudformation-stacksets-automated-cross-account-region-deployments/>

**NEW QUESTION: 3**

Scenario: A Citrix Engineer needs to implement SSL Offload in which traffic is encrypted all the way from the client device to the XenMobile Server. The vServer and service configurations are listed below.

Load balancing vServers:

- Protocol: SSL, Port: 443
- Protocol: SSL, Port: 8443

Services:

- Protocol: SSL, Port: 443 (Bound to 443 vServer)
- Protocol: SSL, Port: 8443 (Bound to 8443 vServer)

The current configuration is NOT working properly.

What should the engineer adjust to implement SSL Offload successfully?

- A.** Bind Port 80 services to both the 443 and 8443 load-balancing vServers but make no other changes.
- B.** Bind the port 8443 service to the port 443 vServer; the port 443 service is NOT needed.
- C.** Bind the port 443 service to the port 8443 vServer; the port 8443 service is NOT needed.
- D.** Bind Port 80 services to both the 443 and 8443 load-balancing vServers and open port 80 on the XenMobile Server IP Tables firewall.

**Answer: B**

#### **NEW QUESTION: 4**

Refer to the exhibit.

Which statement about the debug behavior of the device is true?

- A.** The device debugs all IP events for 172.16.129.4.
- B.** The device sends all debugging information for 172.16.129.4.
- C.** The device sends debugging information every five seconds.
- D.** The device sends only NTP debugging information to 172.16.129.4.

**Answer: A**

Explanation:

This is an example of a conditional debug, where there is a single condition specified of IP address 172.16.129.4. so all IP events for that address will be output in the debug.
