NEW QUESTION: 1

A engineer needs to use the Storage Center setup wizard to complete the local port configuration. The engineer needs to select a value for 'Purpose' for SAS/FC ports that are directly connected between the two system controllers. Which value should the engineer select?

- A. reserved
- B. unknown
- C. direct connect
- D. back end

Answer: D

NEW QUESTION: 2

Which service is best for storing common database query results, which helps to alleviate database access load?

- A. Amazon Machine Learning
- B. Amazon EC2 Instance Store
- C. Amazon ElastiCache
- D. Amazon SQS

Answer: C

Explanation:

Amazon ElastiCache for Redis is a great choice for implementing a highly available, distributed, and secure in-memory cache to decrease access latency, increase throughput, and ease the load off your relational or NoSQL databases and applications.

ElastiCache can serve frequently requested items at sub-millisecond response times, and enables you to easily scale for higher loads without growing the costlier backend databases. Database query results caching, persistent session caching, and full-page caching are all popular examples of caching with ElastiCache for Redis.

NEW QUESTION: 3

When developing a disaster recovery plan, the criteria for determining the acceptable downtime should be the:

- A. service delivery objective.
- B. annualized loss expectancy (ALE).
- C. maximum tolerable outage.
- D. quantity of orphan data.

Answer: C

Explanation:

Explanation/Reference:

Explanation:

The recovery time objective is determined based on the acceptable downtime in case of a disruption of operations, it indicates the maximum tolerable outage that an organization considers to be acceptable before a system or process must resume following a disaster. Choice A is incorrect, because the acceptable downtime would not be determined by the annualized loss expectancy (ALE). Choices B and C are relevant to business continuity, but they are not determined by acceptable downtime.
