When Cisco WCS receives alarm messages from a controller, the Cisco WCS user interface displays an alarm indicator in the lower left corner in an alarm summary panel known as the alarm dashboard. The alarm dashboard only appears when the Macromedia flash is installed. Alarms indicate the current fault or state of an element that needs attention. These are usually generated by one or more events. The alarm can be cleared, but the event remains. An example of an alarm is AP down, which means that the current status of the access point is down. Alarms are color coded as follows:

Clear = No alarm

Red = Critical alarm

Orange = Major alarm

Yellow = Minor alarm
