NEW QUESTION: 3
What are three features of the IPv6 protocol? (Choose three.)
A. plug-and-play
B. optional IPsec
C. checksums
D. no broadcasts
E. complicated header
F. autoconfiguration
Answer: A,D,F
Explanation:
An important feature of IPv6 is that it allows plug and play
option to the network devices by allowing them to configure
themselves independently. It is possible to plug a node into an
IPv6 network without requiring any human intervention. This
feature was critical to allow network connectivity to an
increasing number of mobile devices. This is accomplished by
autoconfiguration.
IPv6 does not implement traditional IP broadcast, i.e. the
transmission of a packet to all hosts on the attached link
using a special broadcast address, and therefore does not
define broadcast addresses. In IPv6, the same result can be
achieved by sending a packet to the link-local all nodes
multicast group at address ff02::1, which is analogous to IPv4
multicast to address
224.0.0.1.
