Answer: D

NEW QUESTION: 3

- A. Option B
- B. Option C
- C. Option D
- D. Option A

Answer: A

NEW QUESTION: 4

You have a Windows image (WIM) file that contains an image of Windows 7. The WIM file is 2 GB.

You need to ensure that you can copy the image to CD.

What should you do?

- A. Right-click the WIM file, point to Send To and then click Compressed (zipped) Folder.
- B. Run Imagex.exe and specify the /split parameter.
- C. Run Dism.exe and specify the /cleanup-wim parameter.
- D. From the properties of the WIM file, enable compression.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

ImageX is a command-line tool that enables original equipment manufacturers (OEMs) and corporations to capture, to modify, and to apply file-based disk images for rapid deployment.

ImageX works with Windows image (.wim) files for copying to a

network, or it can work with other technologies that use .wim images, such as Windows Setup, Windows Deployment Services (Windows DS), and the System Management Server (SMS) Operating System Feature Deployment Pack.

`/split image_file dest_file size`

Splits an existing .wim file into multiple read-only split .wim files (.swm).

`image_file`

Specifies the name and location of the .wim file to split.

`dest_file`

Specifies the file path of the split files.

`Size` Specifies the maximum size in megabytes (MB) for each created file. This option generates the .swm files into the specified directory, naming each file the same as the specified `image_file`, but with an appended number and the .swm file-name extension. For example, if you choose to split a file named `Data.wim`, this option creates a `Data.swm` file, a `Data2.swm` file, a `Data3.swm` file, and so on, defining each portion of the split .wim file.
