If you want to know the quality of our PDF version of AZ-140 new test questions, free PDF demo will show you, Here, we will help you and bring you to the right direction.

NEW QUESTION: 1
You work as the network administrator at Company.com. You plan to appply Cisco WAAS solution to accelerate remote office operations. but the CFO of the company hesitates because of the financial benefits too hard to quantify. Then which statement will be the best response to the CFO of the economic benefits?

A. Ensure the CFO that the Cisco WAAS solution is software that is implemented on servers at both ends of the remote link, and therefore, the only ongoing cost for expansion is additional licenses.
B. make the CFO believe that the Cisco WAAS solution is the lowes cost than any competitive offering.
C. Explain that the company will have to continue to pay more and more for expensive bandwidth as interactions with remote offices increase in frequency and richness of content. A Cisco WAAS solution purchase can defer this expenditure as well as improve remote office productivity.
D. Tell him that the extended payment scheme for the Cisco WAAS solution is tied to predefined productivity gains at the remote office being achieved within a 12-month period.
Answer: C
Explanation:
Section: (none)

NEW QUESTION: 2

NEW QUESTION: 3
According to the ISO 14001 standard, which of the following is

not included in the requirements for a quality management system?
A. The quality management system must be documented in the articles of incorporation, quality manual, procedures, work instructions, and records.
B. The entity must have processes for inspections, testing, measurement, analysis, and improvement.
C. Management must review the quality policy, analyze data about quality management system performance, and assess opportunities for improvement and the need for change.
D. Key processes across the entity which impact quality must be identified and included.
Answer: A

NEW QUESTION: 4
A company is adopting AWS CodeDeploy to automate its application deployments for a Java- Apache Tomcat application with an Apache webserver. The Development team started with a proof of concept, created a deployment group for a developer environment, and performed functional tests within the application. After completion, the team will create additional deployment groups for staging and production The current log level is configured within the Apache settings, but the team wants to change this configuration dynamically when the deployment occurs, so that they can set different log level configurations depending on the deployment group without having a different application revision for each group.
How can these requirements be met with the LEAST management overhead and without requiring different script versions for each deployment group?
A. Tag the Amazon EC2 instances depending on the deployment group. Then place a script into the application revision that calls the metadata service and the EC2 API to identify which deployment group the instance is part of. Use this information to configure the log level settings. Reference the script as part of the Afterinstall lifecycle hook in the appspec yml file.
B. Create a script that uses the CodeDeploy environment variable DEPLOYMENT_GROUP_ID to identify which deployment group the instance is part of to configure the log level settings. Reference this script as part of the Install lifecycle hook in the appspec yml file.
C. Create a script that uses the CodeDeploy environment variable DEPLOYMENT_GROUP_NAME to identify which deployment group the instances is part of. Use this information to configure the log level settings. Reference this script as part of the Beforelnstall lifecycle hook in the appspec.yml file
D. Create a CodeDeploy custom environment variable for each environment. Then place a script into the application revision that checks this environment variable to identify which deployment group the instance is part of. Use this information

to configure the log level settings. Reference this script as part of the ValidateService lifecycle hook in the appspec yml file.
Answer: D
