A company runs an ordering system on AWS using Amazon SQS and
AWS Lambda, with each order received as a JSON message.
recently the company had a marketing event that led to a
tenfold increase in orders. With this increase, the following
undesired behaviors started in the ordering system:
- Lambda failures while processing orders lead to queue
backlogs.
- The same orders have been processed multiple times.

issues with the ordering system and add the following
resiliency features:
- Retain problematic orders for analysis.
- Send notification if errors go beyond a threshold value.

error handling to message processing code and delete messages
after processing, increase the visibility timeout for the
messages, create a dead letter queue for messages that could

errors for notification.

long polling when receiving the messages, log the errors from
the message processing code using Amazon CloudWatch Logs,

additional Lambda workers to poll the queue, delete messages
after processing, increase the message timer for the messages,
