NEW QUESTION: 1

You develop a Windows Communication Foundation (WCF) Simple Object Access Protocol (SOAP) web

service to manage loans. The service is deployed and hosted on-premises. The service includes the following code:

The service has the following requirements:

- * Allow access by third-parties without requiring intrusive changes to the corporate network infrastructure.
- * Include a local endpoint and an endpoint projected through Azure WCF Relay. Both endpoints must use the same contract implementation and transport method.
- * The relay endpoint address must resolve to:

lm://loanmanager.servicebus.windows.net/loans

You begin to update the service code. You reference the Service Bus NuGet package from the service project

You need to configure the endpoints.

How should you complete the code? To answer, select the appropriate options in the answer area.
