NEW QUESTION: 3

Your IT department is building a lightweight Front Controller
servlet that invokes an application logic object with the
interface:

```
public interface ApplicationController {  
public String invoke(HttpServletRequest request)  
}
```

The return value of this method indicates a symbolic name of
the next view. From this name, the Front Controller servlet
looks up the JSP URL in a configuration table. This URL might
be an absolute path or a path relative to the current request.
Next, the Front
Controller servlet must send the request to this JSP to
generate the view. Assume that the servlet variable request is

assigned the current HttpServletRequest object and the variable context is assigned the webapp's ServletContext. Which code snippet of the Front Controller servlet accomplishes this goal?

A. Dispatcher view

```
= context.getDispatcher(viewURL);  
view.forwardRequest(request, response);
```

B. RequestDispatcher view

```
= request.getRequestDispatcher(viewURL);  
view.forward(request, response);
```

C. Dispatcher view

```
= request.getDispatcher(viewURL);  
view.forwardRequest(request, response);
```

D. RequestDispatcher view

```
= context.getRequestDispatcher(viewURL);  
view.forward(request, response);
```

Answer: B
