**Answer:**

Explanation:

Explanation

- Box 1: Azure application Gateway  
 Azure Application Gateway supports end-to-end encryption of traffic. Application Gateway terminates the SSL connection at the application gateway. The gateway then applies the routing rules to the traffic, re-encrypts the packet, and forwards the packet to the appropriate back-end server based on the routing rules defined. Any response from the web server goes through the same process back to the end user.
- Box 2: Azure application Gateway

<https://docs.microsoft.com/en-us/azure/web-application-firewall/ag/ag-overview> Box 3: Azure Traffic Manager Azure Traffic Manager is a DNS-based traffic load balancer that enables you to distribute traffic optimally to services across global Azure regions, while providing high availability and responsiveness.
