NEW QUESTION: 2
Which generating QoS reports CAR tool, what two parameters are valid for report generation? (Choose two)
A. gateway types
B. route pattrens/hunt pilots
C. route groups
D. route Iists
E. partitions
F. IP phone directory numbers
Answer: A,B
Explanation:
Configuring Route Pattern and Hunt Pilot Device Reports Only CAR administrators generate the Route/Hunt List Utilization report. The Route/Hunt List Utilization report provides an estimate of the maximum utilization percentage of the route/hunt list (cumulative utilization of all the gateways under the route/hunt list) for the period and not the exact utilization. The system calculates the cumulative utilization of all the gateways under the route lists and all the lines under the hunt lists.
You can examine the usage based on each hour of a day or on a specified number of days for each week or month. Reports generate for each of the selected route/hunt lists.
You can either view reports that the system automatically generates or generate new reports. Only CAR administrators can schedule reports for automatic generation.

Configuring QoS System Reports
CAR provides reporting capabilities for three levels of users:

Administrators-Generate system reports to help with load balancing, system performance, and troubleshooting.
Managers-Generate reports for users, departments, and QoS to help with call monitoring for budgeting or security purposes and for determining the voice quality of the calls.
Individual users-Generate a billing report for calls by each user.

NEW QUESTION: 4
The technique used to ensure security in virtual private networks (VPNs) is:
A. encryption.
B. transform.
C. encapsulation.
D. wrapping.
Answer: C
Explanation:
Encapsulation, or tunneling, is a technique used to carry the traffic of one protocol over a network that does not support that protocol directly. The original packet is wrapped in another packet. The other choices are not security techniques specific to VPNs.
