ACLs now support IPv4 and IPv6 addresses. You can even specify
a mix of IPv4 and IPv6 addresses for the source and
destination. The any keyword was changed to represent IPv4 and

You use metric filters to search for and match terms, phrases, or values in your log events. When a metric filter finds one of the terms, phrases, or values in your log events, you can increment the value of a CloudWatch metric. For example, you can create a metric filter to search for and count the occurrence of the word CRRORin your log events.
