NEW QUESTION: 1

A. Option D

B. Option B
C. Option A
D. Option C
Answer: B
Explanation:
- Scenario: Database1 will also contain a stored procedure named
usp_UpdateOrderDetails. The stored procedure is used to update
order information. The stored procedure queries the Orders
table twice each time the procedure executes. The rows returned
from the first query must be returned on the second query
unchanged along with any rows added to the table between the
two read operations.
- REPEATABLE READ Specifies that statements cannot read data
that has been modified but not yet committed by other
transactions and that no other transactions can modify data
that has been read by the current transaction until the current
transaction completes.
