AWS-Certified-Cloud-Practitioner latest exam engine and updated AWS-Certified-Cloud-Practitioner from Tinova-Japan audio study guide will make you completely prepared for the Amazon AWS-Certified-Cloud-Practitioner video lectures as these products cover all the aspects of the course.

#### NEW QUESTION: 1

Which of the following is a source control system?  
A. Git  
B. Docker  
C. Jenkins  
D. Kubernetes

#### Answer:

Explanation:

Explanation

Box 1: A source control system

A source control system, also called a version control system, allows developers to collaborate on code and track changes. Source control is an essential tool for multi-developer projects.

Box 2: A hosted service

To build and deploy Xcode apps or Xamarin.iOS projects, you'll need at least one macOS agent. If your pipelines are in Azure Pipelines and a Microsoft-hosted agent meets your needs, you can skip setting up a self-hosted macOS agent.

Scenario: The investment planning applications suite will include one multi-tier web application and two iOS mobile applications. One mobile application will be used by employees; the other will be used by customers.

**NEW QUESTION: 4**

What should you include in the recommendation?

- A. Windows logins
- B. Database roles
- C. Contained users
- D. Server roles

**Answer: C**

Explanation:

\* Scenario: Installation Issues The current version of the ERP application requires that several SQL Server logins be set up to function correctly. Most customers set up the ERP application in multiple locations and must create logins multiple times.

\* Creating contained users enables the user to connect directly to the contained database. This is a very significant feature in high availability and disaster recovery scenarios such as in an AlwaysOn solution. If the users are contained users, in case of failover, people would be able to connect to the secondary without creating logins on the instance hosting the secondary. This provides an immediate benefit. Contained Databases
