What's more, if you fail the exam, we promise to fully refund your cost that you purchased our H13-531\_V3.0 exam dumps.

#### **NEW QUESTION: 1**

Your network contains an Active Directory domain named contoso.com. The network contains two servers named Server1 and Server2.

You deploy Active Directory Certificate Services (AD CS). The certification authority (CA) is configured as shown in the exhibit. (Click the Exhibit button.)

You need to ensure that you can issue certificates based on certificate templates.

What should you do?

- A. On Server1, uninstall, and then reinstall AD CS.
- B. On Server1, run the Add-CertificateEnrollmentPolicyServer cmdlet.
- C. Configure Server2 as a standalone subordinate CA.
- D. On Server1, install the Network Device Enrollment Service role service.

**Answer: A**

Explanation:

Explanation

In a typical CA infrastructure the Stand-alone CAs are primarily intended to be used as Trusted Offline RootCAs in a CA hierarchy or when extranets and the Internet are involved. In a stand-alone CA Certificate templates are not used. An enterprise CA uses certificate types, which are based on a certificate template.

## **NEW QUESTION: 2**

DRAG DROP

You have an Exchange Server 2013 organization named adatum.com. The organization contains a server named Server1. Server1 is a member of a Database Availability Group (DAG) named DAG1.

You have a user named Sales1 in the Sales department.

You need to prevent Sales1 from submitting more than 75 email messages per minute to the Exchange Server organization by using Microsoft Outlook.

Which three commands should you run in sequence? (To answer, move the appropriate three commands from the list of commands to the answer area and arrange them in the correct order.)

Select and Place:

**Answer:**

Explanation:

Explanation/Reference:

Explanation:

Set-mailbox-identity

Use the Set-Mailbox cmdlet to modify the settings of an existing mailbox. You can use this cmdlet for one mailbox at a time.

To perform bulk management, you can pipeline the output of various Get- cmdlets (for example, the Get- Mailbox or Get-User cmdlets) and configure several mailboxes in a single-line command. You can also use the Set-Mailbox cmdlet in scripts.

EXAMPLE 1

```
Set-Mailbox -Identity John -DeliverToMailboxAndForward $true  
-ForwardingSMTPAddress [email#160;protected]
```

The Identity parameter specifies the mailbox.

This parameter accepts the following values:

Alias

Example: JPhillips

Canonical DN

Example: Atlanta.Corp.Contoso.Com/Users/JPhillips

Display Name

Example: Jeff Phillips

Distinguished Name (DN)

Example:

CN=JPhillips,CN=Users,DC=Atlanta,DC=Corp,DC=contoso,DC=com

Domain\Account

Example: Atlanta\JPhillips

GUID

Example: fb456636-fe7d-4d58-9d15-5af57d0354c2

Immutable ID

Example: [email#160;protected]

Legacy Exchange DN

Example:

/o=Contoso/ou=AdministrativeGroup/cn=Recipients/cn=JPhillips

SMTP Address

Example: [email#160;protected]

User Principal Name

Example: [email#160;protected]

The RecipientLimits parameter specifies the maximum number of recipients per message to which this mailbox can send.

You must specify either an integer or unlimited.

If you set this attribute on a mailbox, that mailbox setting overrides the value set for this attribute in the Transport service.

The ThrottlingPolicy parameter specifies the identity of the throttling policy for this mailbox.

New-throttlingpolicy limits

Use the New-ThrottlingPolicy cmdlet to create a non-default user throttling policy.

EXAMPLE 1

This example creates a non-default user throttling policy that can be associated with specific users. Any parameters that you omit inherit the values from the default throttling policy GlobalThrottlingPolicy\_&lt;GUID&gt;.

After you create this policy, you must associate it with specific users.

```
New-ThrottlingPolicy -Name ITUserPolicy -EwsMaxConcurrency 4  
-ThrottlingPolicyScope Regular
```

The RecipientRateLimit parameter specifies the limits on the number of recipients that a user can address in a 24-hour period.

The MessageRateLimit parameter specifies the number of messages per minute that can be submitted to transport.

For messages submitted through the Mailbox server role (using Microsoft Outlook, Microsoft Office Outlook Web App, Exchange ActiveSync, or Exchange Web Services), this results in the

deferral of messages until the quota for the user is available. Specifically, messages appear in the Outbox or Drafts folder for longer periods of time when users submit messages at a rate greater than the MessageRateLimit parameter.

For POP or IMAP clients submitting messages directly to transport using SMTP, clients receive a transient error if they submit at a rate that exceeds the MessageRateLimit parameter. Exchange attempts to connect and send the messages at a later time.

#### Get-throttlingpolicy

Use the Get-ThrottlingPolicy cmdlet to view the user throttling settings for one or more throttling policies.

#### Set-transportserver-identity

Use the Set-TransportServer cmdlet to set the transport configuration options for the Transport service on Mailbox servers or for Edge Transport servers.

#### EXAMPLE 1

This example sets the DelayNotificationTimeout parameter to 13 hours on server named Mailbox01.

```
Set-TransportServer Mailbox01 -DelayNotificationTimeout 13:00:00
```

The Identity parameter specifies the server that you want to modify.

The MaxOutboundConnections parameter specifies the maximum number of outbound connections that can be open at a time. The default value is 1000. The valid input range for this parameter is from 1 through 2147483647. If you enter a value of unlimited, no limit is imposed on the number of outbound connections.

The value of the MaxOutboundConnections parameter must be greater than or equal to the value of the MaxPerDomainOutboundConnections parameter.

#### STEPS

1. New-throttlingpolicy limits - messageratelimit 75 Creates a new throttling policy called limits with a limit of 75 email messages per minute being sent to the exchange server

2. \$b = get-throttlingpolicy limits Establishes a variable \$b with the attributes of the new throttling policy called limits

3. Set-mailbox -identity sales1 - throttlingpolicy \$b Attaches the throttling policy named limits to the user named Sales1

New-ThrottlingPolicy: Exchange 2013 Help

Set-ThrottlingPolicyAssociation: Exchange 2013 Help

#### NEW QUESTION: 3

What are the different logging modes available in Oracle Database 11g? (Choose two.)

- A. LOGGING mode
- B. NOLOG mode
- C. HOTDATABASE mode
- D. ARCHIVELOG mode
- E. NOARCHIVELOG mode

**Answer: D,E**
