NEW QUESTION: 1

Can you encrypt EBS volumes?

A. No, you should use a third-party software to perform raw block-level encryption of an EBS volume.

B. Yes, but you must use a third-party API for encrypting data

before it's loaded on EBS.

C. Yes, you can enable encryption when you create a new EBS volume using the AWS Management Console, API, or CLI.

D. Yes, you can encrypt with the special "ebs_encrypt" command through Amazon APIs.

Answer: C

Explanation:

Explanation/Reference:

Explanation:

With Amazon EBS encryption, you can now create an encrypted EBS volume and attach it to a supported instance type. Data on the volume, disk I/O, and snapshots created from the volume are then all encrypted. The encryption occurs on the servers that host the EC2 instances, providing encryption of data as it moves between EC2 instances and EBS storage. EBS encryption is based on the industry standard AES-256 cryptographic algorithm. To get started, simply enable encryption when you create a new EBS volume using the AWS Management Console, API, or CLI. Amazon EBS encryption is available for all the latest EC2 instances in all commercially available AWS regions.

NEW QUESTION: 2

Your company has one main office and 20 branch offices.

The network consists of one Active Directory domain.

All domain controllers run Windows Server 2008 and are located in the main office.

Each branch office contains a server that runs a Server Core installation of Windows Server 2008.

You need to deploy domain controllers in the branch offices to meet the following requirements:

-The minimum number of services must run on the domain controllers.

-The minimum number of Windows servers must be installed in the branch offices. -Passwords for all users must be stored on the domain controllers in the branch offices.

What should you do on each branch office server?

A. Install a full installation of Windows Server 2008. Install Active Directory Domain Services (AD DS) and configure the server as a domain controller.

B. Install the Windows Server virtualization role. Install a child virtual machine that runs Windows Server 2008 and Active Directory Domain Services (AD DS). Configure the virtual machine as a domain controller.

C. Install Active Directory Domain Services (AD DS) and configure the server as a read-only domain controller (RODC).

D. Install Active Directory Domain Services (AD DS) and configure the server as a domain controller.

Answer: D

Explanation:

Passwords for all users must be stored, which a writeable AD DS will do.

NEW QUESTION: 3

Northern Trail Outfitters (NTO) is implementing the Marketing Cloud and is unsure whether to use lists or data extensions. Their consultant recommended they use data extensions. Which three considerations did the consultant take into account when recommending a data extension-based model over Lists?

Choose 3 answers

- A. NTO has fewer than 15 data points.
- B. NTO will be using Journey Builder.
- C. NTO needs flexible data storage.
- D. NTO has fewer than 250,000 subscribers.
- E. NTO is storing product and store data.

Answer: B,C,E

NEW QUESTION: 4

An HP VAN SDN Controller team is configured consisting of three controllers, using default settings.

-The first controller is configured with IP address 10.1.1.1 and priority 10. -The second controller is configured with IP address 10.1.1.2 and priority 20. -The third controller is configured with IP address 10.1.1.3 and priority 30.

Currently the third controller (IP address 10.1.1.3) is the leader device. An administrator reboots the third controller. Which controller will be the leader once this controller comes back online?

- A. the controller with the IP address 10.1.1.3
- B. The leader role will be shared amongst all team members.
- C. the controller with the IP address 10.1.1.1
- D. the controller with the IP address 10.1.1.2

Answer: D

Explanation:

Once a team is configured, the configuration and monitoring of team members and their associated OpenFlow switches is performed by the team manager. If the team manager goes down, the controller with the next highest priority in the team configuration becomes the team manager.

Note: Team Management Each controller belonging to a team is a team member. To centralize team management and control, one controller is designated as the team manager. Teaming is configured on one controller and is automatically propagated to the other controllers in the team, regardless of which controller becomes the team manager.
