Explanation

Some of the important aspects in such a situation are

- 1) First isolate the instance so that no further security harm can occur on other AWS resources
- 2) Take a snapshot of the EBS volume for further investigation. This is incase if you need to shutdown the initial instance and do a separate investigation on the data
- 3) Next is Option C. This indicates that we have already got logs and we need to make sure that it is stored securely so that n unauthorised person can access it and manipulate it. Option D and E are invalid because they could have adverse effects for the other IAM users.
