You are developing a Microsoft SQL Server Integration Services (SSIS) package. The package design consists of two differently structured sources in a single data flow. The Sales source retrieves sales transactions from a SQL Server database, and the Product source retrieves product details from an XML file. You need to combine the two data flow sources into a single output dataset.

Which SSIS Toolbox item should you use?

- A. XML task
- B. Merge Join
- C. Union All
- D. CDC Control task
- E. Fuzzy Grouping
- F. CDC Splitter
- G. Merge

**Answer: B**

Explanation:

Explanation

The Merge Join transformation provides an output that is generated by joining two sorted datasets using a FULL, LEFT, or INNER join. For example, you can use a LEFT join to join a table that includes product information with a table that lists

the country/region in which a product was manufactured. The result is a table that lists all products and their country/region of origin.
