Examible offers free demo for mcp CAS-004 exam, Since to choose to participate in the CompTIA CAS-004 certification exam, of course, it is necessary to have to go through.

With so many advantages, why don't you choose our reliable CAS-004 actual exam guide, for broader future and better life?

#### **NEW QUESTION: 1**

Your network consists of a single Active Directory domain named contoso.com. All servers run Windows Server 2003 Service Pack 2 (SP2).

The domain contains a domain Distributed File System (DFS) root named DFSroot. The network contains the offices shown in the following table.

Server1 and Server2 currently each host a share named Applications.

You need to implement a solution to meet the following requirements: Automatically redirect users to the Applications folder in their local site.

Ensure that the contents of the Applications shares on Server1 and Server2 are automatically synchronized.

What should you do?

- A.** In the DFS root, create one link named Applications that has \\server1\applications and \\server2 \applications as targets.
- B.** In the DFS root, create one link named Applications1 that

has \\server1\applications as its target. Create a second link named Applications2 that has \\server2\applications as its target.

C. In the Main office computers OU, publish the \\server1\applications share. In the Branch office computers OU, publish the \\server2\applications share.

D. In the DFS root, create a root target that points to \\server1\applications. Create a second root target that points to \\server2\applications.

**Answer: A**

### NEW QUESTION: 2

Which organizational unit is used for interim storage in EWM? Please choose the correct answer.

A. Storage location

B. Activity area

C. Door

D. Staging area

**Answer: D**

### NEW QUESTION: 3

Azure Machine Learning

Studio is a web-based interface for creating and managing machine learning models. It provides a visual interface for building and training models, and for deploying them to production. It also provides a set of APIs for integrating with other services and applications.

Studio is a web-based interface for creating and managing machine learning models. It provides a visual interface for building and training models, and for deploying them to production. It also provides a set of APIs for integrating with other services and applications.

**Answer:**

Explanation:

Explanation

Box 1: Boosted Decision Tree Regression

Mean absolute error (MAE) measures how close the predictions are to the actual outcomes; thus, a lower score is better.

Box 2:

Online Gradient Descent: If you want the algorithm to find the best parameters for you, set Create trainer mode option to Parameter Range. You can then specify multiple values for the algorithm to try.

**NEW QUESTION: 4**

DRAG DROP

**Answer:**

Explanation:

Explanation:

Box 1:

Box 2:

Box 3:

Note:

\*From Scenario:

Allow resource coordinators from Blue Yonder to find temporary staffing options from

Margie's Travel contractors and employees.

\*How to create and configure a SharePoint Search service application

When you deploy and configure a Search service application, you perform the following

main tasks:

- Create accounts - Certain domain user accounts are required specifically for a Search service application.
- Create a Search service application - A Search service application provides enterprise search features and functionality.
- Configure the Search service application - Basic configuration of a Search service application includes configuring a default content access account, an email contact, and content sources.
- You configure a Search service application on the Search Administration page for that service application.
- Configure the Search service application topology - You can deploy search components on different servers in the farm. You can also specify which instance of SQL Server is used to host the search-related databases.

\* Enabling continuous crawl has the following advantages:

The search results are very fresh, because the SharePoint content is crawled frequently to

keep the search index up to date.

The search administrator does not have to monitor changing or seasonal demands for

content freshness. Continuous crawls automatically adapt as necessary to the change rate

of the SharePoint content.
