Our C_EPMBPC_11 exam torrent was appraised as the top one in the market, We will offer you the best preparation materials regarding C_EPMBPC_11 practice exam, The Tinova-Japan Free SAP C_EPMBPC_11 sample questions, allow you to enjoy the process of buying risk-free.

The C_EPMBPC_11 dumps include all C_EPMBPC_11 test questions that you need to prepare for the SAP C_EPMBPC_11 test.

NEW QUESTION: 1

A. Option B
B. Option D
C. Option A
D. Option C
Answer: C

NEW QUESTION: 2
Your network contains an Active Directory domain named contoso.com. All servers run Windows Server 2012 R2. The functional level of both the domain and the forest is Windows Server 2008 R2.
The domain contains a domain-based Distributed File System (DFS) namespace that is configured as shown in the exhibit. (Click the Exhibit button.)

You need to enable access-based enumeration on the DFS namespace.
What should you do first?
A. Install the File Server Resource Manager role service on Server3 and Server5.
B. Raise the domain functional level.
C. Delete and recreate the namespace.
D. Raise the forest functional level.
Answer: C
Explanation:
Access-based enumeration is only supported on a Domain-based Namespace in Windows Server 2008 Mode. This type of Namespace requires a minimum Windows Server 2003 forest functional level and a minimum Windows Server 2008 domain functional level.
The exhibit indicates that the current namespace is a Domain-based Namespace in Windows Server 2000 Mode. To migrate a domain-based namespace from Windows 2000 Server mode to Windows Server 2008 mode, you must export the namespace to a file, delete the namespace, recreate it in Windows Server 2008 mode, and then import the namespace settings.

NEW QUESTION: 3
A user is creating a Cloudformation stack. Which of the below mentioned limitations does not hold true for Cloudformation?
A. One account by default is limited to 20 stacks

B. One account by default is limited to 100 templates
C. The template, parameter, output, and resource descriptionfields are limited to 4096 characters
D. The user can use 60 parameters and 60 outputs in a single template
Answer: B
Explanation:
AWS Cloudformation is an application management tool which provides application modelling, deployment, configuration, management and relatedactivities. The limitations given below apply to the Cloudformation template and stack. There are no limits to the number of templates but each AWS CloudFormation account is limited to a maximum of 20 stacks by default. The Template, Parameter, Output, andResource description fields are limited to 4096 characters. The user can include up to 60 parameters and 60 outputs in a template.

NEW QUESTION: 4
Which OSI layer header contains the address of a destination host that is on another network?
A. session
B. application
C. network
D. physical
E. data link
F. transport
Answer: C
Explanation:
Explanation/Reference:
Explanation:
Only network address contains this information. To transmit the packets the sender uses network address and datalink address. But the layer 2 address represents just the address of the next hop device on the way to the sender. It is changed on each hop. Network address remains the same.
