NEW QUESTION: 3

Your company plans to build an app that will perform the following tasks:

- * Match a user's picture to a picture of a celebrity.
- * Tag a scene from a movie, and then search for movie scenes by using the tags.

You need to recommend which Azure Cognitive Services APIs must be used to perform the tasks.

Which Cognitive Services API should you recommend for each task? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation

Box 1: Computer Vision

Azure's Computer Vision service provides developers with access to advanced algorithms that process images and return information.

Computer Vision Detect Faces: Detect faces in an image and provide information about each detected face.

Computer Vision returns the coordinates, rectangle, gender, and age for each detected face.

Computer Vision provides a subset of the Face service functionality. You can use the Face service for more detailed analysis, such as facial identification and pose detection.

Box 2: Bing Video Search

Search for videos and get comprehensive results

With Bing Video Search API v7, find videos across the web.

Results provide useful metadata including creator, encoding format, video length, view count, improved & simplified paging, and more.
