**Answer: D**

### NEW QUESTION: 2

Which IPv6 prefix in uned for 6to4 tunnel addressen?

- A. 2001::/23
- B. 5f00::/8
- C. 3ffe::/16
- D. 2002::/16
- E. 2001::/32

**Answer: D**

Explanation:

6to4 workn by taking advantage of a reserved IPv6 prefix, 2002::/16. A 6to4 tunnel interface automatically convertn the 32 bitn in itn IPv6 address following thin prefix to a global unicast IPv4 address for transport across an IPv4 network

such as the public Internet.

**Answer:**

Explanation:

Explanation:

Box 1: Strong

Strong: Strong consistency offers a linearizability guarantee. The reads are guaranteed to return the most recent committed version of an item. A client never sees an uncommitted or partial write. Users are always guaranteed to read the latest committed write.

Box 2: Bounded staleness

Bounded staleness: The reads are guaranteed to honor the consistent-prefix guarantee. The reads might lag behind writes by at most "K" versions (that is "updates") of an item or by "t" time interval. When you choose bounded staleness, the "staleness" can be configured in two ways:

The number of versions (K) of the item

The time interval (t) by which the reads might lag behind the writes

Box 3: Eventual

Eventual: There's no ordering guarantee for reads. In the absence of any further writes, the replicas eventually converge.

Incorrect Answers:

Consistent prefix: Updates that are returned contain some prefix of all the updates, with no gaps. Consistent prefix guarantees that reads never see out-of-order writes.
