A. Move line 3 below line 4 and change port 80 to 443 on line 4.
B. Add port 443 to line 5.
C. Add port 22 to line 2.
D. Move line 4 below line 5 and add port 80 to 8080 on line 2.
E. Move line 3 below line 4 and add port 443 to line.
F. Add port 22 to line 5.
G. Add port 443 to line 2.
Answer: E,G

NEW QUESTION: 3
Hinweis: Diese Frage ist Teil einer Reihe von Fragen, die dasselbe Szenario darstellen. Jede Frage in der Reihe enthält eine einzigartige Lösung, die die angegebenen Ziele erreichen kann. Einige Fragensätze haben möglicherweise mehr als eine richtige Lösung, während andere möglicherweise keine richtige Lösung haben.
Nachdem Sie eine Frage in diesem Abschnitt beantwortet haben, können Sie NICHT mehr darauf zurückkommen. Infolgedessen werden diese Fragen nicht im Überprüfungsbildschirm angezeigt.
Ihr Unternehmen entwickelt eine neue Business Intelligence-Anwendung, die auf Daten in einer Microsoft Azure

SQL-Datenbankinstanz zugreift. Alle Objekte in der Instanz haben denselben Eigentümer.

Ein neuer Sicherheitsprinzipal mit dem Namen BI_User erfordert die Berechtigung zum Ausführen gespeicherter Prozeduren in der Datenbank. Die gespeicherten Prozeduren lesen aus Tabellen in der Datenbank und schreiben in diese. Keine der gespeicherten Prozeduren führt IDENTIFY_INSERT-Operationen oder dynamische SQL-Befehle aus.

Der Umfang der Berechtigungen und der Authentifizierung von BI_User sollte auf die Datenbank beschränkt sein. Wenn Sie Berechtigungen erteilen, sollten Sie das Prinzip der geringsten Berechtigungen verwenden.

Sie müssen die erforderlichen Sicherheitsprinzipale erstellen und die entsprechenden Berechtigungen erteilen.

Lösung: Sie führen die folgende Transact-SQL-Anweisung in der Datenbank aus:

Erfüllt die Lösung das Ziel?
A. Nein
B. Ja
Answer: A
Explanation:
Explanation
One method of creating multiple lines of defense around your database is to implement all data access using stored procedures or user-defined functions. You revoke or deny all permissions to underlying objects, such as tables, and grant EXECUTE permissions on stored procedures. This effectively creates a security perimeter around your data and database objects.
Best Practices
Simply writing stored procedures isn't enough to adequately secure your application. You should also consider the following potential security holes.
* Grant EXECUTE permissions on the stored procedures for database roles you want to be able to access the data.
* Revoke or deny all permissions to the underlying tables for all roles and users in the database, including the public role. All users inherit permissions from public. Therefore denying permissions to public means that only owners and sysadmin members have access; all other users will be unable to inherit permissions from membership in other roles.
* Do not add users or roles to the sysadmin or db_owner roles. System administrators and database owners can access all database objects.
