#### **NEW QUESTION: 2**

You are implementing a solution to meet the security requirements for Outlook authentication.

You purchase a new certificate that has a subject name of

mail.proseware.com and SANs of autodiscover.proseware.com and oa.proseware.com.

You create a host (A) record for oa.proseware.com in the public DNS zone. Remote users report that they fail to connect to their mailbox by using Outlook.

You need to ensure that the remote users can connect to their mailbox from Outlook. The solution must meet the security requirements.

Which two commands should you run? (Each correct answer presents part of the solution. Choose two.)

**A.** Set-OutlookProvider EXPR -CertPrincipalName msstd:mail.proseware.com

**B.** Set-OutlookProvider EXPR -CertPrincipalName msstd:oa.proseware.com

**C.** Set-OutlookAnywhere -ExternalHostName oa.proseware.com -ExternalClientAuthenticationMethod Basic -ExternalClientsRequireSsI \$true -InternalHostName mail.proseware.com -InternalClientAuthenticationMethod NTLM -InternalClientsRequireSsI Strue

**D.** Set-OutlookAnywhere -ExternalHostName mail.proseware.com-ExternalClientAuthenticationMethod Basic -ExternalClientsRequireSsI \$true -InternalHostName oa.proseware.com -InternalClientAuthenticationMethod NTLM -InternalClientsRequireSsI \$true

**Answer: A,C**

Explanation:

Set-OutlookProvider EXPR The common benefit of enabling Outlook Provider, is to assure Outlook client connecting to a specific server, which has a specific name in subject name field on the certificate. Set-OutlookProvider EXPR -CertPrincipalName msstd:mail.contoso.com Running above command will force Outlook client "Only connect to proxy servers that have this principal name in their certificate" to be enabled and value set to msstd:mail.contoso.com. If client connects to a proxy server, which does not have mail.contoso.com in subject name field in the certificate, the connection will fail.

Set-OutlookAnywhere Use the Set-OutlookAnywhere cmdlet to modify the properties on a computer running Microsoft Exchange Server 2013 enabled for Microsoft Outlook Anywhere. The ExternalHostname parameter specifies the external host name to use in the Microsoft Outlook profiles for users enabled for Outlook Anywhere. The InternalHostname parameter specifies the internal hostname for the Outlook Anywhere virtual directory. A Subject name of the certificate is mail.proseware.com not oa.proseware.com NOT C Subject name of the certificate is mail.proseware.com not oa.proseware.com B ExternalHostName oa.proseware.com is correct as oa.proseware.com is a host (A) record in the public DNS zone. NOT D ExternalHostName mail.proseware.com is NOT correct as oa.proseware.com is a host (A) record in the public DNS zone.

).aspx

**NEW QUESTION: 3**

You need to build a solution to collect the telemetry data for Race Control.

What should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

API: Table

Azure Cosmos DB provides native support for wire protocol-compatible APIs for popular databases. These include MongoDB, Apache Cassandra, Gremlin, and Azure Table storage.

Scenario: The telemetry data must migrate toward a solution that is native to Azure.

Consistency level: Strong

Use the strongest consistency Strong to minimize convergence time.

Scenario: The data must be written to the Azure datacentre closest to each race and must converge in the least amount of time.
