Answer: D

NEW QUESTION: 2

Your network is connected to the Internet through a firewall.

Remote users connect to Microsoft Windows SharePoint Services (WSS) located on the internal network by using HTTPS.

Users require access to file servers located on the internal network.

You need to ensure that remote users can connect to the file servers. The solution must not require that any additional TCP ports be opened on the firewall.

What should you do?

A. Implement a Secure Socket Tunneling Protocol (SSTP) virtual private network (VPN) solution.

B. Implement a Terminal Services Web Access (TS Web Access) solution.

C. Implement an L2TP virtual private network (VPN) solution.

D. Implement a PPTP virtual private network (VPN) solution.

Answer: A

Explanation:

To ensure that the remote users can connect to the file servers securely but without require opening any additional TCP ports on the firewall, you need to configure a SSTP VPN connection.

SSTP VPN connections are tunneled over SSL using TCP port 443.

Since all firewalls and NAT devices

have TCP port 443 open, you will be able to use SSTP from anywhere without opening any additional TCP

ports on the firewall.
