NEW QUESTION: 1
Which of the following is MOST important when selecting an information security metric?
A. Ensuring the metric is repeatable
B. Defining the metric in qualitative terms

C. Aligning the metric to the IT strategy
D. Defining the metric in quantitative terms
Answer: D

NEW QUESTION: 2
You have been tasked with creating file pool policies for a
customer as part of the configuration document.
Three of the file pool policies are based on matching specific
file extensions.
What file pool policy filter type should you select?
A. File location
B. Filename
C. User defined attributes
D. File type
Answer: B

NEW QUESTION: 3
What are the default timers for RIPng?
A. Update: 5 seconds Expire: 30 seconds Flush: 40 seconds
B. Update: 10 seconds Expire: 60 seconds Flush: 80 seconds
C. Update: 30 seconds Expire: 180 seconds Flush: 240 seconds
D. Update: 20 seconds Expire: 120 seconds Flush: 160 seconds
Answer: C
Explanation:
Explanation/Reference:
Explanation:
Update Timer
The update timer controls the interval between two gratuitous
Response Messages. By default the value is
30 seconds. The response message is broadcast to all its RIP
enabled interface.[8] Invalid Timer The invalid timer specifies
how long a routing entry can be in the routing table without
being updated. This is also called as expiration Timer. By
default, the value is 180 seconds. After the timer expires the
hop count of the routing entry will be set to 16, marking the
destination as unreachable.
Flush Timer
The flush timer controls the time between the route is
invalidated or marked as unreachable and removal of entry from
the routing table. By default the value is 240 seconds. This is
60 seconds longer than Invalid timer. So for 60 seconds the
router will be advertising about this unreachable route to all
its neighbours.
This timer must be set to a higher value than the invalid
timer.[8]
Hold-down Timer
The hold-down timer is started per route entry, when the hop
count is changing from lower value to higher value. This allows
the route to get stabilized. During this time no update can be

done to that routing entry.
This is not part of the RFC 1058. This is Cisco's
implementation. The default value of this timer is 180 seconds.
